

1. Explain the difference between block and inline elements

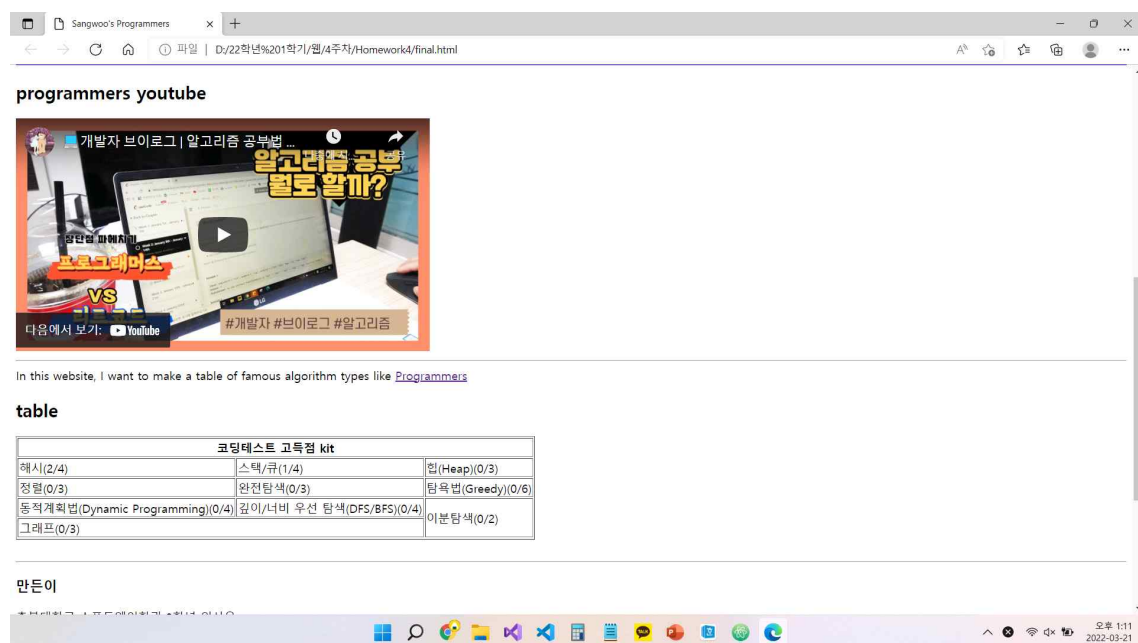

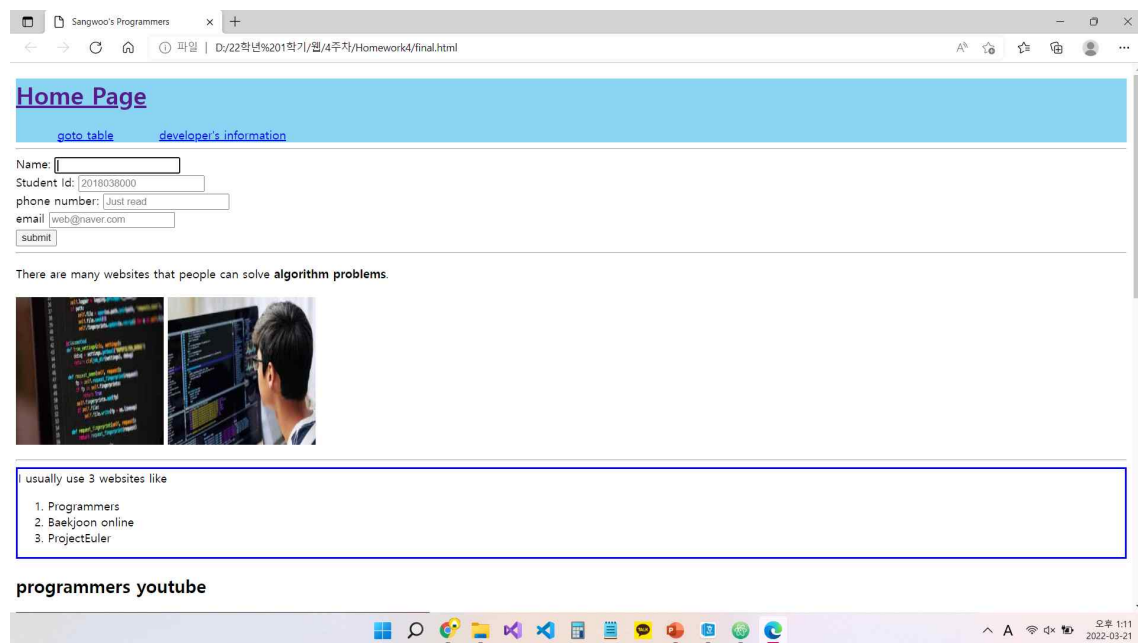

block elements start in a new line and it takes full width.

ex) <h1>~<h6>, <div>, <p> ...

inline elements don't start in a new line and it takes necessary width.

ex) , <input> ...

2.

3. Things I've learned

I learned differences between inline elements and block elements.

Also, video sources, I learned difference among auto, metadata, none.

I learned input tag, many types of input, 4 attributes.

I think input type is important, because we usually use this functions in website Join or Login
